## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 13-17, 20, and 21 are allowed.
2. The following is an examiner's statement of reasons for allowance: the examiner agrees with the applicant that the current combination is novel and non-obvious in view of the art.
3. The invention is drawn to a transmission of a large volume of data from a server to a client over an ISDN network, wherein a notification of incoming data is sent to the client over a D-channel. The client sends messages for both allowance and non-allowance, the allowance message sent if and only if two or more B-channel lines are free. If the server receives a notification of data transmission non-allowance, it enters a transmission allowance waiting state as opposed to a disconnection (P. 9, lines 12-16), and remains in this state until a message of transmission allowance is received. Narrower independent claims add further limitations such as timing information transmission (P. 10, lines 1-3) and client instruction methods (P. 10, lines 10-12). The examiner has determined that art disclosing large transmissions over ISDN lines, while performing B-line monitoring, typically result in a disconnection with or without an agreed time for reconnection, rather than entering a wait state. The related art further fails to teach displaying or announcing an amount of time which is required for a transmission of a large volume of data to a client terminal, or ordering the client terminal to send a later allowance message. Therefore, the independent claims are novel and non-obvious.
4. All other claims depend from the above claims, and are therefore further allowable for the reasons above.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They provide further background of file transmission in ISDN networks.
